

OLD VS CURRENT

PHYSICAL STORAGE SOLUTIONS

Computer with reel to reel technology. This is essentially a large open version of the well known cassette tape. For years this was the most popular mass storage solution.

Tape drive storage. Data solutions have now moved towards the cloud. However, some businesses still prefer a physical backup for control and protection purposes. This is the new version of the oversized reel to reel.

PRINTING

It weighed an absolute tonne, but this was actually one of the first laser printers to sit on top of a desk. It cost \$3500. Pricey!

Printers continue to become more advanced, weigh less and are further compact. You can get an amazing printer for a fraction of the \$3500 price tag.

PHONES

The Motorola DynaTAC 8000x was the first commercial portable phone. Holding 30 contact numbers and allowing 30 minutes of 'talk time', it took 10 hours to charge! This was ground breaking and started the wheel in motion for more effective portable phone solutions.

This is the new iPhone. We have come a very long way. Almost edgeless touch screen, pro camera, super retina display, and water resistant... amazing.

IBM Model PS/2 P70, Anthony used this in one of his first jobs as an IT tech. Essentially the laptop of the past, while this wasn't the first compact design of computer, it was certainly one of the most popular solutions. In it's time it was marketed at \$5399!

'COMPACT' TECHNOLOGY

Image source: HP

A current example of HP's slimline, light and powerful laptops. We expect nothing less than high quality displays, light touch keys and of course portability.
