

Tech that saves desk space

Relevant both in the workspace and with the current shift with working at home. Is there any way to maximise desk space and minimise tech clutter? Yes.

Desktop PC

These compact PC's are fantastic. At ABM we use the brand HP as we have found they are far more resilient and offer great specifications. As an added note, you can also use them as a monitor stand.

Monitor mount

There are tons of variations. But we have found the ones that save space best, are the arms that clip onto the back of the desk. This one is adjustable so you can move your monitors around.

Tiny printer

They may be small, but they are mighty. HP have developed the world's smallest laser printer. (35cm width, 16cm high and 19cm depth.) Others are available but this has high quality printing capabilities.

Mini USB keyboard

First things first, this keyboard is wireless and so you don't have to worry about messy cables. It is also a smaller version of a normal keyboard. We have found people either love this, or really hate it.
